Summary

Senior Linux Infrastructure Engineer with 5.5+ years of experience supporting large-scale Linux production environments.

Experienced in Linux administration, production support, incident management, automation using Ansible, Shell scripting, and Python, along with automated Linux provisioning using PXE/Kickstart.

Hands-on experience providing operational support for Docker and Kubernetes workloads, with personal projects focused on Kubernetes, Prometheus, and Grafana.

Technical Skills

Operating Systems: RHEL, AlmaLinux, CentOS, Ubuntu

Storage & File Systems: LVM, NFS, Samba, CIFS, RAID

Cloud & Virtualization: Microsoft Azure, VMware vSphere

Automation & Scripting: Ansible, Shell Scripting, Python

Containers & Orchestration: Docker, Kubernetes

Monitoring & Alerting: Prometheus, Grafana, Zabbix

OS Provisioning: PXE, Kickstart

ITSM Tools: ServiceNow, Salesforce

Version Control & Database: Git, GitHub, MySQL

Experience

Spanidea Systems Pvt. Ltd.

Sep 2023 – Present

Senior System Administrator | Client: Synopsys, Inc.

- Managed P1/P2 production incidents, performed root cause analysis (RCA), collaborated with cross-functional teams, and restored services within defined SLA timelines.
- Automated Linux system configuration, patching, and operational tasks using Ansible playbooks and ad-hoc commands, reducing manual effort by ~60%.
- Administered large-scale Linux infrastructure, including service management, filesystem administration, package management, authentication, performance tuning, and OS-level troubleshooting.
- Executed PXE/Kickstart-based automated OS provisioning, standardizing deployments across 50+ servers and significantly reducing provisioning time.
- Provided operational support for Docker and Kubernetes workloads by validating deployments, troubleshooting pod and service connectivity issues, and coordinating DNS configuration through Infoblox.

HCL Technologies Limited

Jan 2021 – Jun 2023

Analyst | Client: Blue Yonder, Inc.

- Managed 5000+ virtual machines across Azure and VMware environments, performing VM lifecycle operations including provisioning, CPU/Memory scaling, disk expansion, and capacity management.
- Administered enterprise file-sharing services using NFS, Samba, and CIFS protocols for application and database teams.
- Performed LVM administration including Physical Volume (PV), Volume Group (VG), Logical Volume (LV) creation, filesystem expansion, and storage reclamation activities.
- Supported application and database teams with storage provisioning, filesystem expansion, and performance optimization activities.
- Participated in disaster recovery drills involving 10+ virtual machines, ensuring failover readiness and business continuity.
- Managed patching and maintenance operations across 4000+ Linux systems while maintaining zero escalations.

Ashok Leyland Limited

Dec 2018 – Dec 2019

Graduate Apprentice Trainee

Certifications

RHCE (EX294) | RHCSA (EX200) | AZ-104 Azure Administrator Associate | **AZ-400** DevOps Engineer Expert | **AZ-900** Azure Fundamentals | **MTA 98-381** (Python)

Centralized Infrastructure Provisioning (PXE, Kickstart, Ansible)

- Designed and implemented automated Linux OS provisioning using PXE, Kickstart, DHCP, TFTP, and HTTP repositories.
- Standardized RHEL deployments with automated package installation, network configuration, and post-build customization.
- Reduced provisioning time and manual intervention while improving deployment consistency across environments.

Kubernetes Portfolio Platform (Kubernetes, Docker, MySQL, Prometheus, Grafana)

- Deployed a Flask-based portfolio application on Kubernetes using Deployments, Services, StatefulSets, Secrets, and ConfigMaps.
- Implemented persistent storage with PV/PVC and MySQL StatefulSets, ensuring application data persistence and recovery.
- Integrated Prometheus, Grafana, readiness/liveness probes, and Helm-based deployments for application monitoring and health validation.

Grafana-Prometheus Monitoring Stack (Prometheus, Grafana, Docker, Ansible)

- Built a monitoring platform using Prometheus and Grafana for Linux server monitoring and dashboard visualization.
- Automated deployment and configuration using Docker and Ansible.
- Developed dashboards and alerting workflows to improve visibility into system performance and availability.

Python Data Extraction & Automation Tool (Python)

- Developed Python scripts for automated data extraction, processing, and reporting workflows.
- Eliminated repetitive manual tasks through scheduled automation and validation checks.
- Reduced operational effort by approximately 80% and saved more than 25 hours per month.

Education

Saranathan College of Engineering

B.E. Mechanical Engineering

2014 – 2018
